- 9. Staff Management — PINs, Roles & Permissions**

- 10. Settings — Customising Nexis for Your Business**

- 11. Advanced ERP Modules**

- 12. Offline Mode & Data Sync**

- 13. Troubleshooting & Common Questions**

1.1 Creating Your Account

Nexis is free to start — no credit card needed. Follow these steps to sign up:

- 1 Open **nexisgh.com** on your phone or computer.
- 2 Tap "**Get Started Free**" on the home page.
- 3 Enter your full name, email address, and a password (at least 8 characters).
- 4 Tap "**Create Account**". You are now registered and logged in.

Tip: Use a real email address. You may need it to recover your account later.

1.2 Business Profile Setup

After your first login, Nexis will ask you to set up your business. This takes under 2 minutes.

- 1 Enter your **Business Name** (e.g. "Ama Fashion Store"). This appears on all your receipts and invoices.
- 2 Add your business phone number and email (optional but recommended).
- 3 Select your **Region** in Ghana from the list.
- 4 Enter your business address.
- 5 Create a **6-digit Admin PIN**. This is used inside the app to confirm you are the owner. Keep it safe!
- 6 Tap "**Create Business & Continue**". You will land on your Dashboard.

Important: Your Admin PIN is different from your login password. Write it down somewhere safe. If you forget it, go to Settings to reset it.

1.3 Installing Nexis on Your Phone (PWA)

You do not need to visit the App Store or Google Play. Nexis installs directly from your browser as a **Progressive Web App (PWA)**.

Android — Chrome

Open the website in Chrome. Tap the 3-dot menu (⋮) at the top right. Tap *"Add to Home Screen"* or *"Install App"*. Tap Install. The Nexis icon appears on your home screen.

iPhone — Safari

Open the website in Safari. Tap the Share button (box with arrow) at the bottom. Scroll down and tap *"Add to Home Screen"*. Tap Add. The Nexis icon appears on your home screen.

Once installed, the app opens full-screen like a normal app. It also **works offline** for POS sales.

Smart Opening: If you have never signed in before, opening the app shows you the Nexis home page. Once you sign in, the app takes you straight to your Dashboard every time — no need to log in again.

The Dashboard is the first screen you see after logging in. It shows a live summary of your business — all in one place.

What the Dashboard Shows You

Today's Sales

Total revenue collected today and number of transactions.

Unpaid Invoices

Total amount customers still owe you.

Overdue Invoices

Invoices past their due date — follow up immediately.

Low Stock Alert

Products running low so you can restock before they run out.

Bank Balance

Combined balance across all your business bank accounts.

Month Expenses

Total spending so far this month.

Pipeline Value

Total value of open CRM deals in progress.

Active Production

Manufacturing orders currently in progress.

Navigation

- **On a computer:** A sidebar on the left has all sections organised by group (Sales, Finance, Operations, etc.).
- **On a phone:** A bottom navigation bar shows Home, POS, Stock, Invoices, and a "More" button for everything else.

Tip: Pull down to refresh the Dashboard on mobile, or press F5 on a computer to get the latest figures.

The POS is your smart cash register. It records every sale, updates stock automatically, and handles all payment types including Mobile Money.

3.1 Making a Sale

- 1 Tap **POS** in the navigation menu.
- 2 Search for a product by name, SKU, or scan its barcode. You can also tap it from the product grid.
- 3 Tap the product to add it to the cart. Tap again to increase quantity, or tap the number to type an exact amount.
- 4 Optionally select a **Customer** to link the sale to their record (useful for loyalty points).
- 5 Apply a discount if needed using the discount button.
- 6 Tap "**Charge**". Select the payment method and confirm.

Automatic: Stock quantities update by themselves when a sale is completed. No need to adjust inventory manually.

3.2 Payment Methods

Cash

Enter amount received. The system calculates change automatically.

MoMo (Mobile Money)

MTN, Telecel, and AirtelTigo. Customer pays on their phone.

Card

Record Visa / Mastercard payments.

Split Payment

Mix of cash and MoMo — or any two methods combined.

Accepting MoMo Payments

- 1 Select **MoMo** as the payment method.
- 2 Choose the network: MTN, Telecel, or AirtelTigo.

3 Enter the customer's phone number.

4 Tap "**Request Payment**". The customer receives a prompt on their phone to approve.

5 Once the customer approves, the payment is confirmed automatically.

Note: MoMo payments require Hubtel credentials configured in Settings. Contact your system administrator if this feature is not working.

3.3 Receipts & Voiding a Sale

After every sale, a digital receipt is generated. You can print it or share it via WhatsApp.

To **void (cancel)** a sale that was entered by mistake:

1 Go to POS → Sales History or the Reports section.

2 Find the incorrect sale and tap "**Void Sale**".

3 Confirm. Stock is restored automatically.

Important: Only Managers, Administrators, and Owners can void sales. A regular cashier cannot do this.

3.4 Selling Offline (No Internet)

Nexis keeps working even when there is no internet connection:

- Sales are saved on your device automatically when offline.
- An "**Offline**" indicator appears on the POS screen so you know.
- As soon as internet is restored, all saved sales sync to the cloud automatically.
- You do not need to do anything — it all happens in the background.

Inventory is where you manage every product your business sells. Any product added here will appear in the POS when making a sale.

Adding a Product

- 1 Go to **Stock / Inventory** in the menu.
- 2 Tap the **+ Add Product** button.
- 3 Enter the **Product Name** — this is the only required field.
- 4 Add a **SKU** (unique code) or **Barcode** if you have one.
- 5 Select a **Category** to keep products organised.
- 6 Enter the **Cost Price** (what you paid) and **Selling Price** (what you charge).
- 7 Enter the starting **Quantity** (how many you have in stock).
- 8 Set a **Reorder Level** — Nexis will alert you when stock falls to this number.
- 9 Tap **"Save"**.

Low Stock Alerts

When a product's quantity drops to or below the reorder level:

- A **notification** appears in the bell icon at the top of the screen.
- A **banner** appears at the top of the app warning you.
- The product is highlighted in the inventory list.

Tip: Set the reorder level to the minimum quantity you are comfortable having. For example, if you always want at least 5 units, set the reorder level to 5.

An invoice is a formal payment request you send to a customer. Unlike a POS sale (paid on the spot), invoices let customers pay later.

Creating an Invoice

- 1 Go to **Invoices** and tap **"New Invoice"**.
- 2 Search for the customer or type their name directly.
- 3 Add items or services with their quantities and prices.
- 4 Set the **Due Date** — when the customer must pay by.
- 5 Choose whether to apply Ghana taxes (VAT, NHIL, GETFL). They are calculated automatically.
- 6 Tap **"Save as Draft"** to save without sending, or **"Send Invoice"** to issue it.

Ghana Tax Rates

- **VAT — 15%:** Value Added Tax. For VAT-registered businesses only.
- **NHIL — 2.5%:** National Health Insurance Levy.
- **GETFL — 1%:** Ghana Education Trust Fund Levy.

Nexis calculates all taxes automatically. You only need to turn them on or off in Settings based on your GRA registration.

Invoice Statuses

Draft

Saved but not yet sent to the customer.

Sent

Issued to the customer. Waiting for payment.

Paid

Customer has paid in full.

Overdue

Due date passed without payment. Nexis marks these automatically every morning.

Partial

Cancelled

Customer has paid part of the amount.

Invoice cancelled. No longer valid.

Invoice Numbers: Nexis generates unique invoice numbers automatically (e.g. NXG-2026-001). You never need to number invoices manually.

Customers

The Customers section stores buyer information — contact details, purchase history, outstanding balances, and loyalty points.

Adding a Customer

- 1 Go to **Customers** and tap **"New Customer"**.
- 2 Enter name, phone number, and email (optional).
- 3 Select their region in Ghana.
- 4 Tap **"Save"**.

Loyalty Points

Nexis has a built-in loyalty system. Customers earn points with each purchase. When they accumulate enough points, you can reward them with a discount or free item. Configure the earn rate in **Settings** → **Loyalty**.

Suppliers

Suppliers are the companies or people you buy your products from. Keeping supplier records lets you create Purchase Orders and track deliveries.

Adding a Supplier

- 1 Go to **Suppliers** and tap **"New Supplier"**.
- 2 Enter the business name, contact person, and phone number.
- 3 Add their location and note what products they supply.
- 4 Tap **"Save"**.

Record all money going out of your business — rent, electricity, transport, wages, supplies — so you always know your true profit.

Adding an Expense

- 1 Go to **Expenses** and tap "**Add Expense**".
- 2 Select a **Category** (e.g. Rent, Utilities, Transport, Wages).
- 3 Enter the **Amount** in GHS.
- 4 Set the **Date** of the expense.
- 5 Write a short **Description** so you remember what it was for.
- 6 Select how it was paid (Cash, MoMo, Bank Transfer).
- 7 Optionally upload a receipt photo.
- 8 Tap "**Save**".

Tip: Recording expenses regularly (even small ones) gives you accurate profit calculations in Reports at the end of the month.

Reports show you how your business is performing — presented in simple charts and tables, not just raw numbers.

Sales Report

Revenue by day, week, or month. Best-selling products.

Expense Report

What you spent and in which categories.

Inventory Report

Stock levels, low stock items, inventory value.

Customer Report

Top customers by spend. Loyalty points summary.

Staff Report

Sales per staff member. Useful for commission tracking.

Profit & Loss

Revenue minus expenses to show your net profit.

How to Generate a Report

- 1 Go to **Reports** in the menu.
- 2 Select the report type.
- 3 Set the date range: Today, This Week, This Month, or Custom.
- 4 The report generates automatically with charts and summaries.
- 5 Tap the **Download** icon to save as PDF.

Access: Only Managers and Business Owners can view Reports. Regular cashiers do not see this section.

Nexis uses a PIN-based staff system. Each staff member logs in with a 6-digit PIN — no need for separate email accounts.

Adding a Staff Member

- 1 Go to **Staff** in the menu.
- 2 Tap "**Add Staff Member**".
- 3 Enter their name, phone, email (optional), and department.
- 4 Assign a **Role** — this controls what they can see and do.
- 5 Create a **6-digit PIN** for them.
- 6 Tap "**Save**".

Staff Roles & Permissions

- **Executive / CEO:** Full access to everything.
- **Manager / Supervisor:** Everything except system settings. Can void sales.
- **Accountant / CFO:** Financials, Invoices, Expenses, Reports.
- **Sales Manager:** POS, Invoices, Customers, Sales Orders, Reports.
- **Cashier / Sales Rep:** POS and Customers only. Cannot delete or void.
- **Inventory Manager:** Stock, Suppliers, Purchasing only.

PIN Security

PINs are encrypted — no one, not even administrators, can see the actual PIN stored in the system. After **5 wrong attempts**, the account is locked for 15 minutes.

As the business owner, you are never blocked by the staff PIN screen. You can always sign in using your email and password.

Switching Between Staff

Multiple staff can share one device. When one person finishes their shift, tap **"Switch Staff"** at the bottom of the sidebar. The app goes back to the PIN screen for the next person.

**Business Profile**

Update name, address, phone, email, and upload your business logo.

Tax Settings

Turn VAT (15%), NHIL (2.5%), and GETFL (1%) on or off based on your GRA registration.

Receipt Customisation

Add a header/footer message and choose whether to show your logo on printed receipts.

MoMo Merchant Codes

Enter your MTN, Telecel, and AirtelTigo merchant numbers for accepting MoMo payments.

Dark / Light Mode

Tap the sun/moon icon at the top right of any screen to switch display mode.

Admin PIN Reset

Reset your 6-digit admin PIN from here if you forget it.

Tax note: If your business is NOT registered for VAT with GRA, turn off VAT in settings. Charging VAT without being registered is against Ghana tax law.

As your business grows, Nexis has more powerful tools available. A lock icon on a menu item means you need to upgrade your plan to unlock it.

CRM — Leads & Opportunities

Track potential customers from first contact to closed deal. Leads move through stages (New → Contacted → Qualified → Won), and Opportunities track deal value and expected close dates. Log all calls, meetings, and emails as Activities linked to each contact.

Purchasing — Order from Suppliers

Create formal **Purchase Orders (POs)** to send to suppliers when restocking. When goods arrive, tap "Mark as Received" — stock updates automatically. No double entry needed.

Financials & Banking

Full double-entry accounting with Chart of Accounts, Journal Entries, bank account tracking, and Bank Reconciliation to match your Nexis records against your bank statement.

HR & Payroll

Employee profiles, departments, leave requests, salary records.

Projects

Task management with Gantt charts, team assignments, and budget tracking.

Production / MRP

Bills of Materials and production orders for manufacturing businesses.

Warehouses

Multi-location stock management and transfers between warehouses.

Service Module

Customer service calls, contracts, warranty and equipment tracking.

Sales Orders

Formal orders before invoicing, with quotations and delivery notes.

Works Offline

POS sales, product browsing, customer records, the full app shell.

Needs Internet

Loading new data from other devices, MoMo requests, sending invoice emails.

How Sync Works

- All sales made offline are saved safely on your device.
- When internet returns, they sync to the cloud automatically.
- You will see a brief confirmation once the sync completes.
- Stock levels and reports update immediately after sync.

Using Multiple Devices

If you use Nexis on both a phone and a computer (or tablet), both devices see the same data as long as they are connected to the internet and signed into the same account.

Your Data is Safe

All business data is stored securely in the cloud with automatic daily backups. Even if your phone is lost or damaged, all your data is safe. Just install Nexis on a new device and sign in.

**I forgot my PIN**

Staff members: ask your manager to reset your PIN in Staff → Edit → Change PIN. Business owners: go to Settings to reset the admin PIN.

Account locked after too many PIN attempts

The system locks for 15 minutes after 5 wrong attempts. Wait 15 minutes then try again with the correct PIN.

Offline sales didn't sync

Ensure you have a working internet connection, then open the POS screen. Sync runs automatically. If it still fails, restart the app. Your data is safely stored on the device until it syncs successfully.

Product not showing in POS

Check that the product is in Inventory and is not marked as inactive. Products with 0 stock still appear in POS with a warning — they can still be sold if needed.

MoMo payment not going through

Ensure Hubtel merchant credentials are configured in Settings. Verify the customer has sufficient balance and is using the correct network and phone number.

App shows outdated data

Pull down to refresh on mobile, or press Ctrl+R (Cmd+R on Mac) on a computer. If the app was recently updated, you may see a "Reload" prompt — tap it to get the latest version.
