

NEXIS

The Operating System for
Ghana's Growing Businesses.

INVESTOR BRIEFING . 2026 . CONFIDENTIAL

2.1M+

Registered Ghana
businesses

>85%

Operating without
digital tools

GHS 1.3T

Annual mobile money
volume (BoG, 2023)

Ghana's businesses run on WhatsApp, notebooks, and guesswork.

More than 2 million businesses in Ghana manage operations without dedicated software. Not because they lack ambition - because every tool on the market was built for a different currency, different payment rails, and a different reality. The gap is not awareness. It is relevance.

No financial visibility

1

Owners estimate profit at month-end. By then, shrinkage, write-offs, and missed reorders have already cost money that cannot be traced back.

Imported tools, zero fit

2

QuickBooks prices in USD. Sage does not handle Ghana's VAT + NHIL + GETFL structure. Neither works reliably when the power goes out.

Staff accountability is broken

3

Without per-staff tracking, theft goes undetected. No audit trail. No record of who voided a sale or who gave an unauthorised discount.

Growth is capped by manual process

4

A business that runs on memory and paper cannot scale past the owner's attention span. Delegation requires a system. That system has not existed here - until now.

One complete system, purpose-built for Ghana.

Nexis is a full-stack business management platform. It replaces the notebook, the spreadsheet, and the four separate apps - with one system that speaks GHS, runs offline, and was designed from the ground up for how Ghanaian businesses actually operate.

Ghana tax engine built in

VAT (15%), NHIL (2.5%), and GETFL (1%) are pre-configured. Every receipt and invoice is GRA-compliant automatically.

Offline-first POS

Sales queue locally when the network drops and sync the moment connectivity returns. Power cuts do not stop the till.

Per-staff access control

Every employee gets a unique 8-digit login and personal credentials. Roles define exactly what they can see and do.

Real GHS reporting

Every dashboard, report, and export works in Ghana Cedis. No currency conversion, no approximation.

20+ integrated modules

POS, inventory, invoicing, HR, CRM, purchasing, production, banking - one login, one source of truth.

Multi-tenant & secure

Row-level security enforced at the database. Every tenant's data is fully isolated. No exceptions.

20+ modules.

One login. One source of truth.

Point of Sale

Offline, loyalty, split pay

Inventory

Barcodes, warehouses, alerts

Invoicing

GHS invoices, overdue, PDF

CRM

Leads, pipeline, activities

HR

Staff, leave, org chart

Expenses

Categories, reports

Purchasing

POs, suppliers, receive stock

Production

BOMs, work orders, MRP

Financials

CoA, GL, journal entries

Banking

Accounts, reconciliation

Projects

Gantt, tasks, milestones

Reports

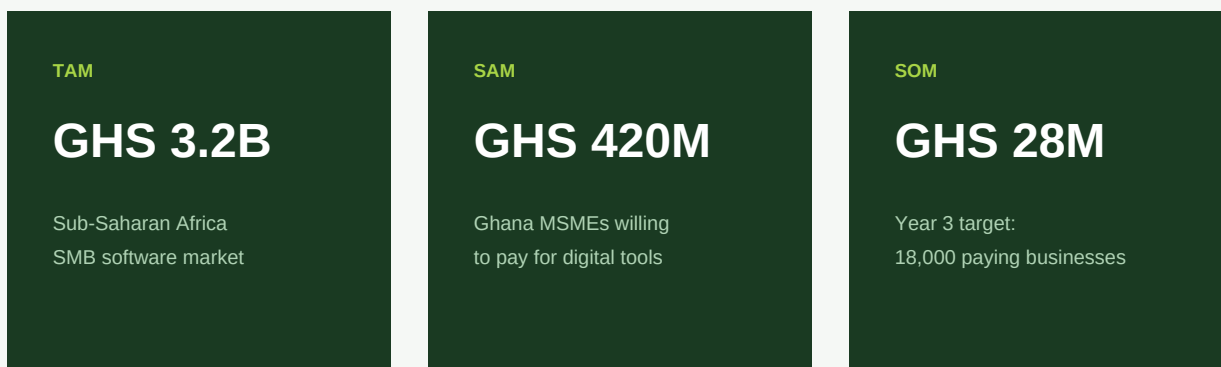

Sales, profit, staff analytics

React 18 . TypeScript . Supabase . PostgreSQL . PWA . Vercel

Row-level security at the database. Every tenant's data is fully isolated.

The market is large, underserved, and already paying - just informally.

Ghana has approximately 2.1 million registered businesses. Over 85% are MSMEs that manage operations manually. This is not a market we need to convince of the value of organisation. They already know. They just haven't found the right tool.

Why Ghana. Why now.

- GHS 1.3 trillion processed via mobile money in 2023 (Bank of Ghana). Digital payment infrastructure is proven.
- Internet penetration above 60% and rising. Smartphone costs continue to fall, expanding the addressable base.
- The Ghana Revenue Authority is pushing digital receipting. Regulatory pressure compounds organic demand.
- No well-funded, locally-built ERP exists for this market. Imported tools have not gained meaningful SMB traction.
- A business that adopts Nexis for POS naturally expands to invoicing, HR, and financials - compounding lifetime value.

Subscription SaaS.

Multiple expansion paths.

Nexis is a monthly or annual subscription. No per-transaction fees on the core product. Predictable cost for businesses; predictable revenue for us. The deeper a business integrates Nexis, the higher the retention - and the higher the lifetime value.

STARTER	PROFESSIONAL	ENTERPRISE
GHS 200/mo	GHS 500/mo	Custom
■ 3 Staff Accounts ■ Unlimited Products ■ POS & Sales ■ Invoicing + Tax ■ Basic Reports ■ Email Support	■ Unlimited Staff ■ All 20+ Modules ■ Full Financials + HR ■ Priority Support ■ Data Export + Backups ■ Purchasing & Production	■ Multi-Branch ■ API Access ■ Dedicated Onboarding ■ SLA Guarantee ■ Custom Integrations ■ Account Manager

Additional Revenue Streams

Setup & onboarding fee

GHS 500-2,000 one-time for business configuration and staff training sessions.

Annual plan discount

2 months free on annual billing - improves cash flow and reduces monthly churn.

Managed bookkeeping

Partner with licensed accountants to offer bookkeeping services on top of Nexis data.

Future: payment margin

As transaction volume scales, negotiate a processing commission through payment integrations.

The product is built. Now we take it to market.

Nexus is not a concept deck. Every module in this brief is live and has been tested. We are pre-revenue, not pre-product. The next milestone is the first 100 paying businesses.

ALREADY BUILT

- + 20+ modules, production-ready
- + Multi-tenant row-level security (DB-level)
- + PWA - offline-capable, installable on mobile
- + Ghana VAT / NHIL / GETFL tax engine
- + Role-based access, unique per-staff logins
- + Automated overdue invoice tracking + email digests
- + PDF invoice generation with business branding
- + CI/CD pipeline via GitHub Actions + Vercel

NEXT 12 MONTHS

- > First 100 paying businesses (Accra + Kumasi)
- > Paystack subscription billing
- > SMS notifications (Arkesel / Hubtel SMS)
- > Mobile money payments integration
- > Multi-branch support
- > Mobile app (React Native / Expo)
- > Accountant partner programme

We are not outsiders guessing at this problem.

We live in this market

Nexis was built by people who understand how Ghanaian businesses operate. The offline requirement, the local tax structure, the staff dynamics - these are not features we read about in a brief. They are the environment.

Full product, not a prototype

Every hour of engineering de-risks the investment. The hard parts - offline sync, multi-tenant isolation, Ghana tax engine, automated reconciliation, role-based access - are complete and running in production.

Moat through integration depth

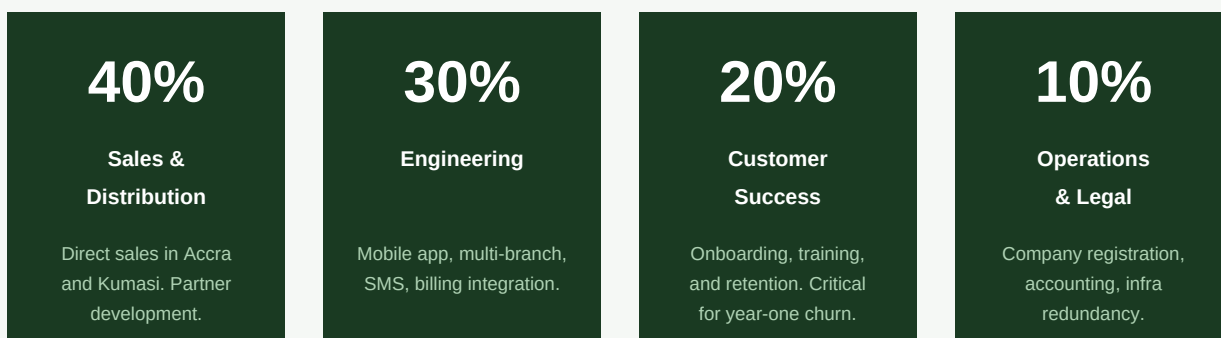

A business using Nexis for POS, inventory, invoicing, HR, and banking does not leave for a tool that only does one of those things. Deep integration creates real switching cost.

Timing is compounding

Mobile money normalised digital payments. The GRA is pushing compliance. Internet penetration is growing. These forces increase the addressable market every month.

What We Are Raising

We are raising a seed round to fund the commercial launch of a product that is operational today. Capital goes toward sales, customer success, engineering, and the mobile app.
