Registered Ghana  
businesses (GSS)

**GHS 1.3T**

Annual mobile money  
volume (BoG, 2023)

**60%+**

Internet penetration  
and growing

# Many Ghanaian businesses are managing on tools that weren't built for them.

A significant share of Ghana's SMEs manage operations with a mix of spreadsheets, handwritten records, and messaging apps. Others have adopted software - but software that prices in USD, ignores local tax structure, and stops working the moment connectivity drops. The problem is not a lack of digital awareness. It is a lack of relevant, affordable tools built for this context.

## Tools built for other markets

1

Most available software - QuickBooks, Sage, Wave - was not designed for Ghana's tax structure (VAT, NHIL, GETFL), pricing in GHS, or the realities of unreliable internet.

## No per-staff accountability

2

Without a proper system, it is difficult to track which staff member processed which sale, issued which discount, or handled which void. This creates gaps in oversight.

## Disconnected operations

3

Many businesses run their POS, inventory, accounting, and HR on different tools - or none at all. There is no single view of how the business is actually performing.

## Offline is not optional

4

Connectivity in Ghana is improving but not guaranteed. A cloud-only system that fails during a power cut or poor-signal period is not reliable enough for daily operations.

# One complete system, purpose-built for Ghana.

Nexis is a full-stack business management platform that consolidates POS, inventory, invoicing, HR, CRM, and financials into a single system. It is designed around Ghana's tax structure, runs offline, and gives every staff member their own personal login rather than a shared device.

## Ghana tax engine

VAT (15%), NHIL (2.5%), and GETFL (1%) are pre-configured. Invoices and receipts are GRA-compliant automatically.

## Offline-first POS

Sales queue locally when the network is unavailable and sync when connectivity returns. No data is lost.

## Per-staff access control

Every employee has a unique 8-digit login. Roles define what each person can see and do - nothing is shared.

## GHS-native reporting

Every dashboard, report, and PDF export is denominated in Ghana Cedis with no conversion or approximation.

## 20+ integrated modules

POS, inventory, invoicing, HR, CRM, purchasing, production, and banking in one login and one database.

## Multi-tenant & secure

Row-level security enforced at the database. Every business's data is fully isolated from others.

# 20+ modules.

## One login. One source of truth.

### Point of Sale

Offline, loyalty, split pay

### Inventory

Barcodes, warehouses, alerts

### Invoicing

GHS invoices, overdue, PDF

### CRM

Leads, pipeline, activities

### HR

Staff, leave, org chart

### Expenses

Categories, reports

### Purchasing

POs, suppliers, receive stock

### Production

BOMs, work orders, MRP

### Financials

CoA, GL, journal entries

### Banking

Accounts, reconciliation

### Projects

Gantt, tasks, milestones

### Reports

Sales, profit, staff analytics

React 18 . TypeScript . Supabase . PostgreSQL . PWA . Vercel

Row-level security at the database. Every tenant's data is fully isolated.

## A large, underserved market with genuine demand for better tools.

Ghana has approximately 2.1 million registered businesses, the vast majority of which are micro, small, and medium enterprises. The addressable market for business software in this segment is largely untapped. Businesses that do pay for software today are often paying for tools that do not fit their needs - creating a clear opening for a locally-built, properly-priced alternative.

### Favourable market conditions

- GHS 1.3 trillion in mobile money transactions in 2023 (Bank of Ghana). Digital financial behaviour is normalised.
- Internet penetration is above 60% and growing. Affordable smartphones continue to expand the potential user base.
- The Ghana Revenue Authority is promoting formal digital receipting, creating compliance-driven demand for systems.
- Most imported software is priced in USD and not adapted to Ghana's tax, currency, or infrastructure realities.
- Businesses that start with one Nexis module tend to expand into others - increasing revenue per customer over time.

# Subscription revenue.

## Expansion paths as the business matures.

The primary revenue stream is monthly or annual subscriptions. There are no per-transaction fees on the core product, which keeps the cost predictable for businesses and removes friction for high-volume merchants. Additional revenue comes from onboarding services and, over time, partner programmes.

| STARTER                                                                                                                                                                                           | PROFESSIONAL                                                                                                                                                                                                       | ENTERPRISE                                                                                                                                                                                   |

### Additional Revenue Streams

#### Onboarding fee

GHS 500-2,000 one-time charge for setup, data migration, and staff training. Charged at sign-up for Professional and Enterprise.

#### Annual billing

Two months free on annual payment. Reduces churn and improves cash flow. Businesses are less likely to cancel mid-year.

#### Accountant partner programme

Accountants and bookkeepers who recommend Nexis earn a referral commission. They become an ongoing acquisition channel.

#### Future: payment integrations

Once mobile money and card payment processing is integrated, we plan to negotiate a small margin on processed transactions.

## How we reach customers.

Our primary target is SME owners and managers in Accra and Kumasi - businesses with 2 to 50 employees that are growing but still running operations manually or on tools that do not fit. We reach them through direct contact, trusted referrals, and partners who already have their trust.

### Direct sales - in person

Our first customers will come from direct outreach. Nexis representatives visit business districts, markets, and industrial areas in Accra and Kumasi, demonstrate the product on-site, and close deals face to face. This is the most reliable way to build early trust with SME owners who have not bought software before.

### Accountant and bookkeeper referrals

Accountants already advise SMEs on record-keeping and tax compliance. A referral from a trusted accountant carries weight that a digital ad does not. We build a partner programme where accountants earn a commission for each business they bring on - turning them into a recurring acquisition channel.

### Trade associations

Ghana National Chamber of Commerce and Industry (GNCCI), Association of Ghana Industries (AGI), and sector-specific groups hold events and reach thousands of business owners. Sponsoring or presenting at these events puts Nexis in front of qualified decision-makers at relatively low cost.

### Referral programme

Existing customers are the most credible salespeople. Businesses that refer a paying customer receive one free month. This keeps acquisition cost low and creates organic word-of-mouth in the tight-knit SME communities in each city.

### Targeted digital advertising

Meta and Google ads targeted at business owners in Ghana, particularly those searching for accounting software, POS systems, or payroll tools. Used to generate inbound leads that the sales team can follow up on directly.

### Content and community

Short educational content on LinkedIn and WhatsApp Business groups for SME owners - covering topics like Ghana tax filing, stock management, and managing staff. Positions Nexis as a useful resource, not just a product.

# The product is built. Now we take it to market.

Nexis is pre-revenue, not pre-product. Every module in this brief is live and has been tested. We are at the stage of acquiring the first paying customers, not building toward a minimum viable product.

## ALREADY BUILT

- + 20+ modules, production-ready
- + Multi-tenant row-level security
- + PWA - offline-capable, installable
- + Ghana VAT / NHIL / GETFL tax engine
- + Role-based access, per-staff logins
- + Automated overdue invoice tracking
- + PDF invoice + receipt generation
- + CI/CD pipeline on Vercel

## NEXT 12 MONTHS

- > First 50 paying businesses
- > Paystack subscription billing
- > SMS notifications integration
- > Mobile money payment processing
- > Multi-branch support
- > Mobile app (React Native / Expo)
- > Accountant partner programme launch

## What we are raising and how it will be used.

We are raising a seed round to fund the commercial launch of a product that is already built and running. The priority is getting paying customers, not continuing to build. Capital will be used for direct sales, customer success, and the engineering work needed to complete the roadmap.

**40%****Sales & Distribution**

Salesperson in Accra and Kumasi. Transport, demos, and partner development costs.

**30%****Engineering**

Mobile app, Paystack billing, SMS, payment integrations, and multi-branch support.

**20%****Customer Success**

Onboarding staff, training materials, and support. Reducing churn in year one.

**10%****Operations & Legal**

Company registration, accounting, server costs, and compliance.

### Unit Economics (target, Year 1)

|                                       |                                                    |
|---------------------------------------|----------------------------------------------------|
| Average monthly revenue per customer  | <b>GHS 320 (blend of Starter and Professional)</b> |
| Target paying customers by month 12   | <b>300-500 businesses</b>                          |
